

Mixolydian and the minor Pentatonic

When faced with improvising over a dominant seventh chord or a progression of dom7's, many guitar players tend to resort to the minor or the Blues pentatonic as their default tonal material. Especially in a "bluesy" context, such as a standard Blues progression, this works very well and the straight forward structure of the pentatonic allows plenty of room to think about phrasing, timing, tone and all the other musical parameters that go beyond harmonic material.

However, integrating the Mixolydian scale into your harmonic repertoire will add a whole new musical component to your solo playing and, especially in combination with the minor pentatonic, can make your solos sound a lot more exciting and engaging to the listener!

Constructing the Mixolydian scale

Mixolydian is the fifth mode of the Ionian system. This means that if you'll play the Ionian (major) scale from its fifth note onwards - thinking of that fifth note as the new root - you will end up with a Mixolydian scale.

Take for example C Ionian (C D E F G A B C) and play it from its fifth note G onwards, up to the next G - this will give you G Mixolydian (G A B C D E F G). The numbers above the tab below tell you which degree of the scale each note represents:

C Ionian

Musical notation for the C Ionian scale (C D E F G A B C) in 4/4 time. The scale is shown on a treble clef staff with a key signature of one flat (Bb). The notes are: C (1), D (2), E (3), F (4), G (5), A (6), Bb (maj7), C (1). Below the staff is a guitar tablature with fret numbers: 8, 10, 12, 8, 10, 12, 9, 10.

G Mixolydian

Musical notation for the G Mixolydian scale (G A B C D E F G) in 4/4 time. The scale is shown on a treble clef staff with a key signature of one flat (Bb). The notes are: G (1), A (2), B (3), C (4), D (5), E (6), F (7), G (1). Below the staff is a guitar tablature with fret numbers: 10, 12, 9, 10, 12, 9, 10, 12.

If you'd like to read more about the Ionian System and its modes, have a look here:
<https://www.londonguitaracademy.com/seven-modes-of-the-ionian-system>

For the most part, the Mixolydian scale is identical to the Ionian scale, except for one crucial detail: While Ionian has a **major 7**, Mixolydian has a **minor 7**, making it the perfect scale for Dom7 chords, which - just as the Mixolydian scale - contain a **major third and minor seventh**.

So, another easy way of constructing Mixolydian scales is taking a major scale and simply lowering its seventh note by a semitone. In the following examples, we'll expand the scales over several octaves covering all six strings to give you a practically useful pattern for each scale.

C Ionian

Musical notation for the C Ionian scale. The top staff shows the scale in treble clef with notes C, D, E, F, G, A, B, C, D, E, F, G, A, B, C. The notes are labeled with fret numbers: 1, 2, 3, 4, 5, 6, maj7, 1, 2, 3, 4, 5, 6, maj7, 1, 2, 3, 4. The bottom staff shows the fretboard with strings T, A, B and fret numbers 8, 10, 12, 8, 10, 12, 9, 10, 12, 9, 10, 12, 10, 12, 13, 10, 12, 13.

C Mixolydian

Musical notation for the C Mixolydian scale. The top staff shows the scale in treble clef with notes C, D, E, F, G, A, Bb, C, D, E, F, G, A, Bb, C. The notes are labeled with fret numbers: 1, 2, 3, 4, 5, 6, 7, 1, 2, 3, 4, 5, 6, 7, 1, 2, 3, 4. The bottom staff shows the fretboard with strings T, A, B and fret numbers 8, 10, 12, 8, 10, 12, 8, 10, 12, 9, 10, 12, 10, 11, 13, 10, 12, 13.

Note that the difference between C Ionian and C Mixolydian is their seventh note (B and Bb).

Combining Mixolydian and the minor pentatonic

As mentioned earlier on, a strong way of incorporating the Mixolydian scale into your solo is combining it with the minor pentatonic, as this brings out the characteristics of each scale. Let's have a look at which notes the two scales have in common and which notes make up the differences:

C minor pent

C Eb F G Bb C

C Mixolydian

C D E F G A Bb C

The main difference – apart from the obviously different amount of notes that each scale is made up off – is the *major third* in Mixolydian opposed to the *minor third* in the minor pentatonic. This minor third played on a Dom7 chord (which itself inherently has a major third) is what makes it sound “bluesy” and somewhat wailing, and is an important stylistic device in Blues improvisation. Using the major third of Mixolydian will give you a brighter sound, bringing out a different shade of the Dom7 chord you're improvising on. The major second and sixth of Mixolydian further add to that brighter sound, the rest of the notes (1 4 5 7) are identical to the pentatonic. In the following example on a C7 chord we'll combine the two scales – note how the feel gets brighter once we switch to Mixolydian in bar 3 (not counting the pick up bar)!

The image displays a musical score for a blues solo on a C7 chord. It consists of two systems of notation, each with a treble clef staff and a guitar tablature staff. The first system shows a 4-measure phrase. The first measure is a pick-up bar with a C7 chord symbol. The second measure uses the C minor pentatonic scale (C, Eb, F, G, Bb, C). The third measure switches to the C Mixolydian scale (C, D, E, F, G, Ab, C), which is noted as being brighter. The fourth measure returns to the C minor pentatonic scale. The second system shows a 3-measure phrase, with the first measure using the C minor pentatonic scale and the second and third measures using the C Mixolydian scale, again demonstrating the brighter sound.

Every Dom7 chord has its own respective Mixolydian scale. When the chord changes from C7 to F7 in our Blues progression, the Mixolydian scale of the moment would now change to F Mixolydian as well.

A strong way of navigating through those chord changes without “merely” jumping from one Mixolydian to the next, is to alternate between the *minor pentatonic of the key* (C min pent) and the *Mixolydian scale of the moment* (C, F or G Mixolydian).

A great exercise to practise this is to write out the chord progression your are improvising on and to mark in which tonal material you’ll use in your solo at what point. An example could look like this:

C min pent ----- **C Mixolydian**-----

C7	C7	C7	C7
-----------	-----------	-----------	-----------

C min pent----- **C Mixolydian**-----

F7	F7	C7	C7
-----------	-----------	-----------	-----------

G Mixolydian----- **C min pent**-----

G7	G7	C7	C7
-----------	-----------	-----------	-----------

As you can see, there are almost endless possibilities of when to use which scale and it is great practice and a lot of fun to experiment with different combination of those scales and to listen to how the sound and feel of your solo changes!

The Mixolydian Pentatonic

At the end of this article, I’d like to show you hybrid between the minor pentatonic and the Mixolydian scale: The *Mixolydian Pentatonic*, which just as the minor pentatonic (and every other pentatonic for that matter – that’s why they call it pentatonic) consists of five notes. We can easily construct that scale by simply turning the minor third of the minor pentatonic into a major third:

The image shows a musical score for a scale in G Mixolydian mode. The top staff is a standard musical staff with a treble clef and a key signature of one flat (Bb). The notes are G4, A4, Bb4, C5, D5, E5, F5, G5, with a final G5 tied to the previous note. Below the staff are three lines of guitar tablature labeled 'T', 'A', and 'B'. The fret numbers are: T: 1, 3, 4, 5, 7, 1, 3, 4, 5, 7, 1, 3; A: 8, 11, 8, 12; B: 8, 7, 8, 10, 8, 10, 9, 10, 8, 11, 8, 12.

This scale contains the “essence” of the Mixolydian sound and, due to its structural similarity to the minor pentatonic, is a great gateway from the minor pentatonic towards the Mixolydian scale!
